## **New Product Release MULTI-QUAT MEGA 1**

Intercon announces the release of our new Hospital Type Disinfectant Cleaner – MULTI-QUAT MEGA 1.

MEGA 1 replaces Multi-Quat HBV in the Intercon line. The concentrated 1 oz. per gallon MEGA 1 formula offers a great improvement to end use economy, while its moderate pH level in both concentrate and diluted forms reduces risk for potential damage to floor finishes or other chemically sensitive surfaces.

The MEGA 1 formula incorporates biocides, builders, surfactants and water conditioning ingredients to maintain effectiveness, even in hard water conditions. It combines excellent cleaning with wide ranging germicidal efficacy. In addition to its' proven efficacy against HBV (Hepatitis B Virus) and HIV-1, it can be used in combination with one of Intercon's TB-effective disinfectants, such as Multi-Quat TB or Interphene 128, to provide an ideal basis for an OSHA Bloodborne Pathogen Compliance Program.

Other microorganisms which MEGA 1 has demonstrated efficacy against include:

- Pseudomonas Aeruginosa
- Staphylococcus Aureus
- Salmonella Choleraesuis
- MRSA (Methicillin-resistant Staphylococcus Aureus)
- VRE (Vancomycin-resistant enterococcus faecalis)
- VISA (Vancomycin Intermediate Resistant Staphylococcus Aureus)
- Multi-Drug Resistant Staphylococcus Aureus
- RSV (Respiratory Syncytial Virus)
- many others, including veterinary organisms

When all the features are considered, this product justifies its name as the "MEGA" in 1 oz. per gallon disinfectants. Try MULTI-QUAT MEGA 1 soon. You will appreciate its' cleaning effectiveness and wide range germicidal efficacy.

If you have questions about this or any other product of INTERCON, please call our Tech Service Department at 800-325-9218 ext. 580.
