NEW LAUNDRY TEST KIT

Intercon announces the release of the new LAUNDRY TEST KIT. This kit incorporates several improvements over the original combined Warewash/Laundry kit, making it more durable and service-friendly.

As was the case with our recently released new WAREWASHING TEST KIT, input from our Distributors led to a review of the design and function of the Laundry components of the combined test kit. This led to several design improvements which have been made part of the new kit. These improvements include:

- Color and letter coded reagents. These provide easy identification to use the correct product for each test, every time.
- Smaller case size. Slimmer, easy to carry profile.
- All parts used are made of plastic. No glass parts are included, eliminating potential breakage in the field
- Titration is accomplished by droppers. This eliminates the conversion of a syringe measurement, making the entire process simpler.
- New, easy-to-use Test Procedures Guide. Includes additional test procedures as well as enhanced Troubleshooting and Diagnostic guidelines.
- Addition of a Washer/Extractor Capacity Guidelines chart for determination of correct loading procedures
- Lower test kit cost.

We are confident that you will find the incorporation of these upgrades convenient and beneficial for your service program.

If you have questions about this or any other product of INTERCON, please call our Tech Service Department at 800-325-9218 ext. 580.
