NEW WAREWASHING TEST KIT

Intercon announces the release of the new WAREWASHING TEST KIT. This kit incorporates several improvements over the original combined Warewash/Laundry kit, making it more durable and service-friendly.

As is often the case, valuable input from our Distributors led to a review of the design and function of the Warewashing components of the combined test kit. This led to several design improvements which have been made part of the new kit. These improvements include:

- Color and letter coded reagents. These provide easy identification to use the correct product for each test, every time.
- Smaller case size. Slim, easy to carry profile.
- All parts used are made of plastic. No glass parts are included, eliminating potential breakage in the field
- Titration is accomplished by droppers. This eliminates the conversion of a syringe measurement, making the entire process simpler.
- New, easy-to-use Test Procedures Guide. Includes additional diagnostic test procedures as well as directions for using the Titration Values Table as an initial account set-up tool.
- Lower test kit cost.

We are confident that you will find these upgrades convenient and beneficial for your service program. Look for our upcoming release of our new Laundry Test Kit in July 2001! This will also incorporate similar upgrades as are found in the Warewash Kit.

If you have questions about this or any other product of INTERCON, please call our Tech Service Department at 800-325-9218 ext. 580.
