Description

This granular herbicide is a non-selective, total vegetation killer and soil sterilant that effectively eliminates all vegetation. It uses 1.5% Bromacil for control of a wide range of annual weeds and grasses. This product is absorbed into the roots for a complete kill, resulting in a non-productive condition of the soil for up to a year or more. The duration of non-productivity is dependent on rainfall, soil type and other conditions.

Features...Benefits

- Ready for Use Convenient
- Non-Selective Highly Effective
- Effective During Growth Cycle Labor Saving
- Eliminates Undesirable Growth Improved Safety
- Provides Long Term Residual Control Labor Saving

Directions For Use

GENERAL VEGETATION CONTROL: For DRY granular treatment, apply 1/2 to 2 pounds per 100 sq. foot. The lighter rates should be used only at time of weed emergence on moist soil or when precipitation is anticipated while weeds are still young.

PERENNIAL WEED CONTROL: Persistent perennial weeds are most effectively treated when nearing maturity or during dormant stages in the Fall. Apply 1 to 3 pounds per sq. foot. On deep-rooted perennials such as Bindweed, Canada Thistle, Bermuda Grass and Quack Grass the heavier rates may be required.

JOHNSON GRASS CONTROL: Apply dry at 2 to 3 pounds per 100 sq. ft. for the control of established perennial grasses. Seedlings can be controlled with 1 to 2 pounds per 100 sq. ft. Maximum efficiency on Johnson Grass is obtained by treating after heading until late fall.

Safety Information

KEEP OUT OF REACH OF CHILDREN

CAUTION: Harmful if swallowed or inhaled. Avoid breathing dust. Remove contaminated clothing and wash before reuse. Do not get in eyes, on skin or on clothing. Wash thoroughly with soap and water after handling. **IF SWALLOWED:** Call a physician or Poison Control Center immediately. **IF IN EYES:** Flush with plenty of water. See physician if irritation persists. **IF ON SKIN:** Remove contaminated clothing and wash affected area with soap and water.
